Art Unit: 1775

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1,4 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The amount of solid solution having high Zr or Nb is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). Saying the amount is 'high' is not enough to describe the amount in claim 1.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Ichikawa et al (6,207,262).

Ichikawa et al discloses the claimed WC-Fe group material with the claimed amount of Nb or Zr therein (Table 2, type p and w).

Art Unit: 1775

5. Claims 1-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Mitsubishi Material (JP 11277304).

Mitsubishi Materials discloses the claimed WC-Fe group material with the claimed amount of Nb or Zr therein (table 2, type g and r).

6. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Mitsubishi Material (JP 10287947 or 10225804).

Mitsubishi Materials discloses the claimed WC-Fe group material with the claimed amount of Nb or Zr therein (table 2, type b and e).

7. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshimura (5,447,549) or Fujimori et al (4,279,651).

The rejection is maintained for reasons of record in paper No.6. Applicant's arguments filed 2-6-03 have been fully considered but they are not persuasive. The applicant argues that Yoshimura does not suggest two solid solutions. The applicant's attention is directed to Example 3 where two or more cubic carbides are used that will produce two or more solid solutions and thus the rejection stands. Similarly, Fujimori et al discloses in Table 3, the 8th and 9th structure having more than two cubic carbides and thus two or more solid solutions and thus the rejections stand.
